

UI/UX & Layout Audit Report

Executive Summary – Landing Page Overview

The landing page demonstrates clear domain intent but suffers from **visual clutter in hero components, inconsistent card dimensions, and weak call-to-action (CTA) affordances**. Below is a detailed breakdown and low-fidelity structural recommendations for each section.

1. Hero Header Section

HIGH PRIORITY

UI/UX & Layout Audit

- Hierarchy:** H1 is clear, but floating card pills on the right lack grid alignment.
- Presentation:** Green outline cards float over image, causing text contrast/accessibility issues.
- CTA & Search:** Missing primary search/filter bar to speed up user navigation.

Changes to Implement

- Align right floating cards into a structured 2x3 grid or clean pill matrix.
- Darken background overlay mask behind light card pills (4.5:1 contrast).
- Add a prominent search box: "Search calculator, e.g., BMI, TDEE..."

+-----+ | [HERO SE

2. Popular Calculators Section

MEDIUM PRIORITY

UI/UX & Layout Audit

- Grid Alignment:** 2x3 grid has uneven text lines, leading to jagged card heights.
- Card Hierarchy:** Title, description, and link have similar font weights.
- Affordance:** Missing hover state cues and directional icons.

Changes to Implement

- Enforce uniform card heights via Flexbox stretch & clamp limits.
- Typography scale: Bold H3 (18px) -> Muted body (14px) -> Link with arrow (->).
- Add subtle card drop-shadow and hover transform lift (`translateY(-4px)`).

UI/UX & Layout Audit Report

Page 1: Landing Page (localhost:3000) - Sections 4 to 8

Target: FitnessCalculatorsPro
Scope: Content Layout & FAQ

3. Find the Right Calculator & Category Sections

LOW PRIORITY

UI/UX & Layout Audit Table Layout: Static 2-column table creates high scanning effort. Category Blocks: Repetitive pale green containers with cramped list bullets underneath cards.	Changes to Implement - Convert static table into interactive "Goal Cards" with direct action tags. - Merge bullet text into expandable info accordions under category groups.
---	--

4. Measurements Comparison & Why Use Us

MEDIUM PRIORITY

UI/UX & Layout Audit Color Consistency: Yellow background card on the right breaks global green color token scheme. Visual Weight: Heavy dark card on left paired with light grid on right creates visual tilt.	Changes to Implement - Standardize all background cards to brand green/slate light tokens. - Equalize card heights and align text bullet margins cleanly to the left.
--	--

5. FAQ Section & Bottom CTA Banner

HIGH PRIORITY

UI/UX & Layout Audit FAQ UX: 2-column pill grid lacks expand/collapse indicators (+ / v). Footer Transition: Dark CTA box touches dark footer directly without visual separation.	Changes to Implement - Convert FAQ to a single-column full-width accordion list with clear chevron icons. - Add 40px neutral white space buffer between CTA card and Footer.

UI/UX & Layout Audit Report

Page 2: Tool Page (/bmi-calculator) - Tool Widget & Categories

Target: /bmi-calculator
Scope: Tool & Data Presentation

Executive Summary — BMI Calculator Tool Page

The BMI Calculator page provides thorough medical context, but suffers from **cramped input form components, low-visibility calculation results, and monochrome table presentations** for BMI health risk categories.

1. Calculator Tool Widget Header

HIGH PRIORITY

UI/UX & Layout Audit

- Form Density:** Inputs and unit switchers are tightly packed inside the dark hero header block.
- Results State:** Results card on the right looks unassigned prior to user action.

Changes to Implement

- Separate Hero Title banner from the main Tool Card Widget container.
- Highlight Results Card dynamically with high-contrast accent border once calculated.
- Enlarge unit toggle buttons (US Customary vs Metric) for touch mobile users.

+-----+ | [BREADCRUMBS]

2. BMI Categories Table Section

MEDIUM PRIORITY

UI/UX & Layout Audit

- Split Tables:** Categories are split across two separate tables, forcing redundant reading.
- Data Visualization:** Missing health risk color indicators (Underweight/Normal/Obese).

Changes to Implement

- Combine two stacked tables into a single cohesive data grid.
- Add status badges: Blue (Underweight), Green (Normal), Yellow (Overweight), Red (Obese).

UI/UX & Layout Audit Report

Page 2: Tool Page & Action Plan Priority Matrix

Target: Both Site Pages

Scope: Content Formatting & Matrix

3. Formula Displays & Related Calculators Grid

LOW PRIORITY

UI/UX & Layout Audit

- Formulas:** Embedded inside standard paragraph text without code/math styling.
- Related Cards:** Bottom links ("Calculate Now ->") use low-contrast text color.

Changes to Implement

- Render mathematical formulas inside dedicated code callout boxes.
- Style bottom recommendation links as structured outline secondary buttons.

4. Consolidated Action Plan & Fix Matrix

Below is the prioritized implementation checklist for both audited pages to maximize conversion and user experience:

Page / Section	Identified UI/UX Defect	Required Technical Fix	Priority
Home: Hero	Unaligned floating cards, missing search	Restructure into 2x3 grid, add Hero Search Input field	HIGH
Home: FAQs	Grid layout with poor click affordance	Convert to 1-column accordion list with open/close chevrons	HIGH
BMI: Tool Card	Cramped inputs & passive results box	Separate title header, enlarge inputs, add gauge indicator	HIGH
Home: Grid Cards	Uneven card height across 3 columns	Apply CSS Flexbox `stretch` and description line-clamping	MEDIUM
BMI: Categories	Split monochrome tables	Merge tables, add color status badges (Green/Yellow/Red)	MEDIUM
Home: Colors	Yellow card breaks core brand palette	Re-skin cards with standard light slate/green design tokens	LOW
